Re: Cambusbarron Speeding

I am writing on behalf of a number of constituents who have contacted me regarding their concerns of speeding on St Ninians road in Cambusbarron. They have stated that there have been three car accidents on this section of road this year alone. Various pictures have been sent to me, I will attach some of the most recent crash, but there also appears to have been another collision at the end of September between two cars where one car ended up on its roof. They believe that speeding is playing an important factor in this, however, if the council's findings state that it is not a contributing factor, lowering the speed limit would still help to prevent further accidents that are as severe as the last two collisions have been.

The primary concern of most of the residents is that these collisions have taken part on a busy stretch of road that is used by both the Primary and High School students walking to and from school. I believe the most recent collision happened not long after school finished for the day so there were parents walking home with their children.

Could you please address the concerns of these constituents who are extremely worried about the safety of their families on this road?

Yours sincerely,

Evelyn Tweed MSP
